

Smart Methods AI Task One - ROS Insulation

Bahaa Hammad

ROS is preferred to run on Linux OS, thus, the installation is split into two parts. First, installing Linux. Second, installing ROS on Linux.

Installing Linux – Ubuntu 20.04:

ROS Noetic is supported by Ubuntu 20.04

Start by installing a Virtual Machine to run Linux. I choose Oracle VM.

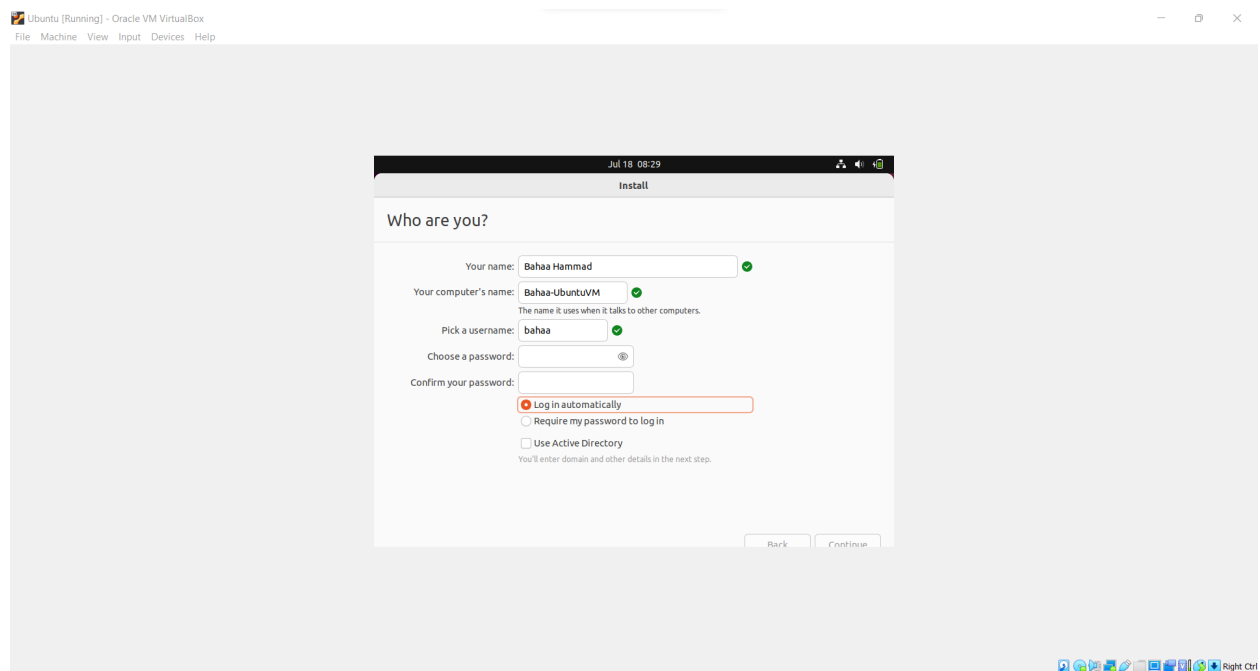

<https://www.virtualbox.org/wiki/Downloads>

Then, download ubuntu, which is one of the Linux distributions.

<https://ubuntu.com/download/alternative-downloads>

Finally, put them both together by following the steps on the ubuntu website to set up ubuntu on the virtual machine.

<https://ubuntu.com/tutorials/how-to-run-ubuntu-desktop-on-a-virtual-machine-using-virtualbox#1-overview>

Installing ROS – Noetic:

By following Neotic documentation to install ROS on ubuntu 20.04.

<http://wiki.ros.org/noetic/Installation/Ubuntu>

Due to a security incident, apt update fails to work, by stating that the key to a repo is unavailable.

The old key has been revoked as part of the measures to deal with a recent security incident.

Through research, I found an article that solves the problem by providing the new keys.

<https://answers.ros.org/question/325039/apt-update-fails-cannot-install-pkgs-key-not-working/>

```

To run ROS, “roscore” must be typed every time in the terminal.

To avoid typing “ source /opt/ros/noetic/setup.bash ” every time opening the terminal, used the “ echo "source /opt/ros/noetic/setup.bash" >> ~/.bashrc ” command.

For future package installations, use:

sudo apt install ros-noetic-PACKGENAME

Now ROS Noetic is installed on Ubuntu 20.04 and running.

A terminal window titled "roscore http://bahaa-VirtualBox:11311/" with standard window controls. The terminal shows the execution of the "roscore" command. It logs into a directory, checks disk usage, and then starts the roslaunch server. The output includes a summary, parameters for rosdistro (noetic) and rosversion (1.15.14), and a list of nodes being started, including the master process and the core service.

```
bahaa@bahaa-VirtualBox:~$ roscore
... logging to /home/bahaa/.ros/log/74965344-0677-11ed-8a4c-5572fbc3af4b/roslaunch-bahaa-VirtualBox-33709.log
Checking log directory for disk usage. This may take a while.
Press Ctrl-C to interrupt
Done checking log file disk usage. Usage is <1GB.

started roslaunch server http://bahaa-VirtualBox:38775/
ros_comm version 1.15.14
